

Gage Telephone Systems Teams Up With MG Security Systems to Provide Small to Mid-Size Businesses With State-Of-The-Art Digital Video Surveillance Systems

Customized CCTV and DVR Design Differentiates Technology Offering

Baton Rouge, LA – December 15, 2006 - Gage Telephone Systems, a leader in business communications, announced today that it has teamed up with MG Security Systems, a supplier of digital video recording (DVR) and closed circuit television (CCTV) equipment, to provide small to mid-size businesses with state-of-the-art digital video surveillance systems. The partnership enables the region's companies to benefit from the customization of CCTV and DVR design from MG Security Systems unparalleled offering.

“Over the last few years, the use of CCTV and DVR technology, particularly IP-based systems, has grown to unprecedented levels. Companies want to protect their most important assets and this technology gives them the power to do just that. Recent technological leaps in digital imaging, and the sudden ubiquity of the Internet has made it possible to have real-time, easy to use—and legally admissible—surveillance systems for multiple sites for a very moderate cost,” said Jason Landry, Sales manager of Gage Telephone Systems.

MG Security Systems is a quality and service based company that designs and installs both closed circuit DVR and IP based video surveillance systems including point of sale (POS) interfaces. MG Security Systems thoroughly tests every product shipped from their factory to ensure proper operation. The company then provides professional support with immediate response for their products. Each and

every product is custom designed and manufactured to meet their customers' individual specifications.

“Video surveillance technology is one of the most valuable loss prevention, safety, security and management tools available today. Companies utilize surveillance systems to monitor shoplifters and dishonest employees, compile recorded evidence against bogus accident claims, and monitor merchandising displays in stores that may be hundreds of miles away. Manufacturers, governments, hospitals, universities and financial institutions use surveillance systems to identify visitors and employees, monitor hazardous work areas, thwart theft and ensure the security of their premises and parking facilities. We have seen phenomenal increases in demand for this technology from our customers and as a result we determined it was in their best interests to partner with MG Security Systems, a company that has the capacity to meet all of their needs,” added Mr. Landry.

“We're thrilled about the opportunity to provide Gage Telephone Systems' customers with our product and service offering,” stated Ed Michelson, co-founder of MG Security Systems. “Our approach is very different than our competition. At MG Security Systems, we customize every solution and then back it by an exceptional level of support. Our mission is customer centric and we have one primary goal in mind – complete protection of our customers' most important assets.”

ABOUT GAGE TELEPHONE SYSTEMS

GAGE Telephone Systems, Inc. was established in 1980 by Gregory A.

Wood, Sr. The company's original mission continues today, which is to provide the finest telecommunications products and services that enable its clients to increase their profitability, obtain a competitive advantage, and improve employee productivity. GAGE Telephone Systems has served the Baton Rouge and South Louisiana business community for over 25 years through a culture of striving towards excellence and unparalleled commitment to customer service.

GAGE Telephone Systems helps companies of all sizes simplify their technology decisions with straight answers about everything from business telephone systems and local/long distance service to Internet, DSL, VoIP and voicemail services. The company conducts a complete needs analysis to ensure that each customer implements the right technology to meet their needs now and into the future.
